

ABSTRACT OF THE DISCLOSURE

A pool cover support assembly for supporting a pool cover over a swimming pool. The assembly basically comprises a central upstanding post and plural, flexible, flaccid straps. The upstanding post is arranged to extend upward from the bottom surface of the pool to a point above the sidewall of the pool. Each strap is arranged for securement to the top of the post and
5 to be extended for releasable securement to the pool adjacent the pool's sidewall and tightened to form a generally downwardly directed conically shaped umbrella-like-frame over which the pool cover can be disposed.
